

Turbo-Link

Data Pipe direct access to more than 50 Lists from your own front end interface or GUI.

CAS' Turbo-Link, a solution for seamlessly integrating robust, demographically enriched data into your existing user interface. The Turbo-Link Data Pipe allows you to run counts in real time and place orders directly from your current e-commerce or data application.

Turbo-Link was created for the more advanced data user. Rather than the re-branded private label count and order interface of CAS' Turbo-Marketing.net, the users of Turbo-Link are seeking a cost-effective and time sensitive solution to incorporate data into their existing systems. Turbo-Link allows you to do just that, with a minimum of additional programming and no extensive data usage agreements with multiple compilers. With Turbo-Link you have immediate, real time access to data, allowing you to increase productivity, and more importantly, increase profitability.

Who can benefit from Turbo-Link? Virtually any company that requires data to fuel their services: Print-on-demand, on-line direct mailing services, list and data providers, research, and many more.

OVERVIEW

Turbo-Link seamlessly integrates CAS' ConsumerVision and other databases into an existing interface. By sending specific count and order commands, you have real-time access to XML versions of the data. This access allows count and order functionality with all of the necessary components available to provide a successful user-interface.

With Turbo-Link, your users will be able to take advantage of the features that are necessary to successful list production. With Turbo-Link you can:

- Run counts and place orders on any of the lists and demographics available on the Turbo-Link platform
- Suppress prior orders
- Capture a SAN for access to scrubbed/non-scrubbed telephone numbers on the National DNC File
- Capture customer order numbers or PO numbers for easy order tracking
- Suppress Client Master Files
